

Installing the CGM Pebble App to your Pebble Watch

Prerequisites

If you're looking to follow along with this tutorial, you'll need the following:

- An Android phone or an iPhone with the Pebble app installed and running.
- A [Pebble watch](#).
- A Wi-Fi network to transfer your app to your mobile device and Pebble watch.

One rather important point to note: your iPhone/Android device and your computer will need to be on the same Wi-Fi network in order for you to push new apps to it.

1. If Iphone: Turn Developer function "On" in the Pebble App on iPhone. In Settings, scroll towards the bottom and click "Pebble". Turn Developer Mode On. Now go to Pebble App and Click Developer and enable Development mode. Note the Server IP that phone is broadcasting.
2. If Android: Turn Developer function "On" in the Pebble App in Android. Go to the Pebble App and Click Developer and enable Development mode. Note the Server IP that phone is broadcasting.
3. Go to Cloudpebble.net. Login using the same login you used to setup pebble watch.
4. Go to "Your Projects" and click "Import Project". Under Zip File, click "Choose File" and find downloaded CGM Pebble App zip file. Name CGM App and click "Import".

5. Click App Name and the “Compilation” on Left Pane. Click “Run Build”, and once built, click on right to connect phone. Click “Not listed? Enter phone IP manually” and enter IP address that the Pebble App is broadcasting. Click Install and Run. Make sure phone and pebble are next to you.

6. CGM Pebble App should now be installed.
